

JORDAN AVERY

Senior Backend Software Engineer

Austin, TX | jordan.avery@example.com | (512) 555-0147 | github.com/jordanavery

SUMMARY

Senior backend engineer with 8 years of experience designing and operating distributed services and REST APIs at scale. Specialized in Python and Go microservices on AWS, with deep experience in PostgreSQL, Redis, and event-driven architectures using Kafka. Comfortable owning systems end to end: design, build, deploy, on-call. Authorized to work in the United States; no sponsorship required.

SKILLS

Languages: Python, Go, SQL, TypeScript, Bash

Backend: FastAPI, Flask, gRPC, REST API design, GraphQL

Data: PostgreSQL, Redis, Kafka, Elasticsearch, DynamoDB

Cloud / Infra: AWS (EC2, S3, Lambda, RDS, ECS), Docker, Kubernetes, Terraform

Practices: CI/CD, microservices, distributed systems, observability, unit testing

EXPERIENCE

Senior Backend Engineer – Brightwave Payments, Austin, TX 2021 - Present

- Led design of a distributed payment-processing platform handling 12M transactions per day, cutting p99 latency by 40% via async Python services.
- Built and operated 15+ microservices in Python (FastAPI) and Go on AWS ECS, with PostgreSQL and Redis backing stores.
- Owned the Kafka-based event pipeline for settlement and reconciliation; defined schemas, partitioning, and exactly-once consumer semantics.
- Mentored 4 engineers; ran the on-call rotation and incident reviews.

Backend Engineer – Northwind Logistics, Remote 2018 - 2021

- Implemented REST APIs in Python (Flask) for a fleet-tracking product serving 2,000+ B2B customers.
- Migrated a monolith to containerized microservices on Kubernetes, reducing deploy time from 45 minutes to under 5.
- Added end-to-end observability (Prometheus, Grafana) and automated CI/CD.

Software Engineer – Cobalt Systems, Dallas, TX 2016 - 2018

- Wrote data-processing pipelines in Python and SQL over PostgreSQL.
- Built internal tooling and automated test suites; raised coverage to 85%.

EDUCATION

B.S. in Computer Science – University of Texas at Austin, 2016

PREFERENCES

Open to remote or hybrid roles (US). Targeting senior backend / platform engineering positions. Full-time only.
